

**SERVER SYSTEM WITH SEGREGATED MANAGEMENT LAN
AND PAYLOAD LAN**

Abstract of the Disclosure

5 A cPCI server system includes a plurality of host processor cards for providing
management LAN communications and payload LAN communications. A first card is
coupled to the plurality of host processor cards and is coupled to a payload LAN. The
plurality of host processor cards are configured to provide payload LAN communications
through the first card. A second card is coupled to the plurality of host processor cards
10 and can be optionally coupled to a management LAN. The plurality of host processor
cards are configured to provide management LAN communications with the management
LAN through the second card.
